Design Patterns Assignment

Exercise-1:

Creational (abstract factory, builder, singleton, static factory method)

1. (a) java.lang.Runtime
   (b) java.lang.Desktop
   Follows Singleton design pattern.

2. (a) com.google.common.collect.MapMaker
   Follows Builder design pattern

3. (a) java.util.Calendar
   (b) java.text.NumberFormat
   (c) java.nio.charset.Charset
   Following the Static Factory design pattern.

4. (a) javax.xml.parsers.DocumentBuilderFactory
   (b) javax.xml.transform.TransformerFactory
   (c) javax.xml.xpath.XPathFactory
   Follows Abstract Factory design pattern.

Structural (adapter, decorator, flyweight)

1. (a) java.lang.Integer
   (b) java.lang.Boolean
   Follows Flyweight design pattern

2. (a) java.io.InputStreamReader
   (b) java.io.OutputStreamWriter
   (c) java.util.Arrays
   Follows Adapter design pattern

3. (a) java.io.BufferedInputStream
   (b) java.io.DataInputStream
   (c) java.io.BufferedOutputStream
   (d) java.util.zip.ZipOutputStream
   (e) java.util.Collections#checkedList()
   Follows Decorator design pattern

Behavioural (chain of responsibility, command, iterator, observer, strategy, template method)

1. (a) javax.servlet.FilterChain
   Follows Chain of responsibility design pattern

2. (a) java.lang.Runnable
   (b) java.util.concurrent.Callable
   Follows Command design pattern

3. (a) java.util.Iterator
   Follows Iterator design pattern

4. (a) java.util.Comparator
   (b) javax.servlet.Filter
   Follows Strategy design pattern

5. (a) java.util.AbstractList, java.util.AbstractSet, java.util.AbstractMap
   (b) java.io.InputStream, java.io.OutputStream, java.io.Reader,java.io.Writer
   Follows Template design pattern

6. (a) java.util.EventListener
   (b) java.util.Observer/java.util.Observable
   Follows Observer design pattern

Exercise 2

1. it is hard to create a proper unit test, because there is tight coupling in the given implementation.

2.

```
public interface ServerConfigInterface
{
public String getAccessLevel(User user);
}

public interface AccessCheckerInterface
{
public boolean mayAccess(User user, String path);
}
```

```
public interface Response {
String getStatus();
Map<String, String> getHeaders();
String getBody();
}

public class FileResponse implements Response {
public FileResponse(String path) {
this.path = Paths.get(path);
}
@Override
public String getStatus() {
return "200";
}
@Override
public Map<String, String> getHeaders() {
HashMap<String, String> headers = new HashMap<String, String>();
headers.put("content-type", Files.probeContentType(path));
return headers;
}
@Override
public String getBody() {
byte[] bytes = Files.readAllBytes(path);
String body = new String(bytes);
```

```
}
private Path path;
}
public class NotFoundResponse extends FileResponse {
public NotFoundResponse() {
super(app.Assets.getInstance().getNotFoundPage());
}
@Override
public String getStatus() {
return "404";
}
}
public class MarkdownResponse i mplements Response {
public MarkdownResponse(String body) {
this.body = body;
}
@Override
public String getStatus() {
return "200"
}
@Override
public Map<String, String> getHeaders() {
HashMap<String, String> headers = new HashMap<String, String>();
headers.put("content-type", "text/html");
return headers;
}
@Override
public String getBody() {
return Markdown.parse(body).toHtml();
}
private String body;
}
public class Test {
public static void main(String[] args) {
Module module = new AbstractModule() {
@Override
protected void configure() {
bind(AccessCheckerInterface.class).to(AccessCheckerMock.class);
}
};
SessionManager maneger =
Guice.createInjector(module).getInstance(SessionManager.class);
User user = new User();
maneger.createSession(user, "path");
}
}
```

Exercise 3

1.)

Applying static factory method

```
public class Responses {
  public static Response notFoundResponse() {
```

```
return new NotFoundResponse();
}
public static Response markdownResponse() {
return new MarkdownResponse();
}
public static Response fileResponse() {
return new FileResponse();
}
}
```

2.)

```
public class Response {
private String status;
private Map<String, String> headers;
private String body;
}
public class Responses {
public static Response response(String status, Map<String, String> headers, String body) {
return new Response(status, headers, body);
}
public static Response file(String status, String path) {
Path filePath = Paths.get(path);
HashMap<String, String> headers = new HashMap<String, String>();
headers.put("content-type", Files.probeContentType(filePath));
byte[] bytes = Files.readAllBytes(filePath);
String body = new String(bytes);
return response(status, headers, body);
}
public static Response notFound() {
return file("404", app.Assets.getInstance().getNotFoundPage());
}
public static markdown(String body) {
HashMap<String, String> headers = new HashMap<String, String>();
headers.put("content-type", “text/html");
return response("200", headers, Markdown.parse(body).toHtml());
}
}
```
